

Miliken can do a Broadloom of the custom design carpet that will come in a 13' x 6" wide by however long we want that can be cut to the width of our staircase.

They also do a seaming diagram for us that will show exactly where all the seams are for future reference and they produce an optimization report for the installer that will give them the best way to get the most out of the carpet ordered. CAD drawings of the venue would be needed.
